Software engineer: built .NET claims microservices and Azure Government Cloud infrastructure for the VA Community Care Network at Optum (UnitedHealth Group), cut an 11-hour data pipeline to under 4 minutes, and resolved a long-standing production failure spanning identity, SQL, and Terraform. Also founded and operates Oakrift, an AI media-intelligence SaaS.

## EXPERIENCE

**Software Engineer (Contract) | Optum (UnitedHealth Group), via Brooksource | Remote** Mar 2025 – Jun 2026

- Inherited a months-old production failure in core claims-processing jobs that prior investigations couldn't crack. Diagnosed and resolved 13 distinct issues across managed-identity auth, SQL schema ownership, and Terraform database provisioning in Azure Government Cloud, restoring critical background workflows in every environment.
- Built .NET microservices and Hangfire background jobs processing 837D claims and 835 remittance files for the Department of Veterans Affairs Community Care Network.
- Cut a SQL Server extraction pipeline from 11 hours to under 4 minutes by replacing row scans with dictionary-indexed lookups, caching XML parsing, and parallelizing execution. An overnight batch became an on-demand operation.
- Enabled live feature-flag updates across the platform's job services: diagnosed why Azure App Config values never refreshed after boot, then designed the two-part fix the team shipped, eliminating pod restarts for config changes.
- Led technical analysis and a Kubernetes parallel-processing proof of concept for the 837 outbound claims-submission process, identifying admission-webhook failures under concurrent load.
- Ran backlog refinement and knowledge-transfer sessions, including scoping an 835/EOP payment-orchestration epic with architecture, data, and infrastructure teams.

**IT Consultant (Contract) | Accenture, via Brooksource | Remote** Aug 2024 – Mar 2025

- Developed Azure Data Factory pipelines, Databricks PySpark notebooks, and SQL stored procedures supporting provider- and member-data workflows across dev, test, and production.
- Reviewed 400+ Azure Data Factory pipelines to identify Databricks dependencies and document storage usage across Synapse and historical data zones. Investigated duplicate records and wrote engineering defects for remediation.
- Managed Azure DevOps releases and documented Part C Explanation of Benefits (EOB) and outbound healthcare-data workflows.

## PROJECTS

**Oakrift — AI Media Intelligence SaaS | Founder & Engineer (Whitescale Labs LLC)** Sep 2025 – Present

- Built workflows turning multi-source coverage into sourced executive briefs, topic trends, and severity-ranked crisis alerts, using retrieval, embeddings, and statistical tests that flag meaningful shifts in coverage volume.
- Ingestion pulls from 8+ media platforms (social, video, news, broadcast), processing thousands of items weekly with per-customer spend limits.
- Runs the platform in production solo: Stripe billing, auth, multi-tenant RBAC, rate limiting, and monitoring.

## SKILLS

**Languages:** TypeScript, JavaScript, C#, Python, SQL

**Product Engineering:** Next.js, React, Node.js, .NET, REST APIs, PostgreSQL, Stripe

**Cloud & Platform:** Azure, AWS, Kubernetes, Docker, Terraform, Azure DevOps, GitHub Actions, Sentry, Application Insights

**Applied AI:** Claude & OpenAI APIs, RAG, embeddings & semantic search, LLM evaluation pipelines, source-citation validation, LLM cost & latency optimization

## EDUCATION & CREDENTIALS

**B.S. Economics, Minor in Computer Science — Florida International University, Miami** 2022 – 2024

**Harvard Business School CORE** 2025 – 2026

**Certifications:** Certified Kubernetes Administrator (CKA), 2025; AWS Certified Developer – Associate, 2024

**Languages:** English (fluent), Spanish (fluent)
