Software engineer who builds backend systems, cloud infrastructure, and products used by customers. At Optum, cut a SQL Server process from 11 hours to under 4 minutes and resolved a production failure that had been open for months across identity, SQL, and Terraform. Also founded and operates Oakrift, an AI media intelligence SaaS serving a paying enterprise customer.

EXPERIENCE

Software Engineer (Contract), Optum (UnitedHealth Group)

Brooksourc | Remote | Mar 2025 - Jun 2026

- Resolved a production failure in claims processing jobs that had been open for months by diagnosing 13 issues across managed identity authentication, SQL ownership, and Terraform database provisioning. Restored the jobs across every Azure Government environment.
- Built .NET services and Hangfire background jobs that processed healthcare claim and payment files for the Department of Veterans Affairs Community Care Network.
- Cut a SQL Server extraction from 11 hours to under 4 minutes by replacing repeated row scans with indexed lookups, caching parsed XML, and running independent work in parallel. The team could run it on demand instead of overnight.
- Fixed live feature flag updates in .NET job services by completing the missing Azure App Configuration refresh setup, so changes no longer required Kubernetes pod restarts.
- Built a Kubernetes proof of concept for parallel claims submission and found an admission webhook failure that appeared when several workloads started at once.

IT Consultant (Contract), Accenture

Brooksourc | Remote | Aug 2024 - Mar 2025

- Developed Azure Data Factory pipelines, Databricks PySpark notebooks, and SQL procedures for provider and member data workflows across development, test, and production.
- Reviewed more than 400 Azure Data Factory pipelines to map Databricks dependencies and storage use. Investigated duplicate records and documented defects for the engineering team.
- Managed Azure DevOps releases and documented outbound healthcare data workflows.

PROJECTS

Founder and Engineer, Oakrift, Whitescale Labs LLC

AI media intelligence SaaS | Sep 2025 - Present

- Built and now operates Oakrift, a B2B media intelligence product serving a paying enterprise customer, and works directly with the customer on requirements, demos, and onboarding.
- Created the product in TypeScript, Next.js, React, Node.js, and PostgreSQL, including the interfaces customers use to read briefs, track topics, and review alerts.
- Built ingestion across more than eight media platforms. The system processes thousands of items each week and uses retrieval, embeddings, and statistical tests to create sourced briefs and flag meaningful changes in volume.
- Runs the platform in production with Stripe billing, authentication, tenant permissions, rate limits, monitoring, source citation checks, and cost controls.

SKILLS

Languages TypeScript, JavaScript, C#, Python, SQL

Product Engineering Next.js, React, Node.js, .NET, REST APIs, PostgreSQL, Stripe

Cloud and Platform Azure, Kubernetes, Docker, Terraform, Azure DevOps, GitHub Actions, Sentry, Application Insights

Applied AI Claude and OpenAI APIs, RAG, embeddings, semantic search, LLM evaluation, source citation checks, cost and latency optimization

Other Bilingual (English/Spanish), Customer Communication, Technical Demos, Cross-functional Collaboration

EDUCATION AND CREDENTIALS

B.S. Economics, Minor in Computer Science, Florida International University, Miami | 2022 - 2024

Harvard Business School CORE | 2025 - 2026

General Assembly, Software Engineering Immersive, Remote | Jul 2023 - Dec 2023

Completed 480+ hours of full stack training in React, Node.js, Express, REST APIs, and capstone projects

Certified Kubernetes Administrator (CKA), 2025 | AWS Certified Developer Associate, 2024
