Miramar, FL | (954) 412-8651 | alexander.dlosant@gmail.com

Full-stack software engineer who builds with LLM APIs and AI coding agents. At Optum (UnitedHealth Group), built .NET claims services for the VA Community Care Network and cut an 11-hour pipeline to under 4 minutes.

Experience

Software Engineer (Contract) | Optum (UnitedHealth Group), via Brooksource

Mar 2025 – Jun 2026

- Built **.NET** microservices and **Hangfire** jobs that orchestrate claims and payment files across SFTP servers and Azure for the VA Community Care Network.
- Protected HIPAA data in **Azure Government Cloud**, with **PGP** encryption and decryption of claims files.
- Cut a **SQL Server** data pipeline from **11 hours to under 4 minutes** with indexed lookups, caching, and parallel processing, turning an overnight batch into an on-demand job.
- Fixed a months-old production failure in core claims jobs that earlier investigations couldn't solve, tracking down **13 separate issues** across Azure auth, SQL schema ownership, and **Terraform**.
- Found why **Azure App Configuration** feature flags never refreshed after startup, and designed the fix the team shipped so config changes no longer needed pod restarts.
- Led a **Kubernetes** proof of concept for parallel claims submission and found why it failed under load.
- Ran backlog refinement and knowledge-transfer sessions, and scoped a payments epic with three teams.

IT Consultant (Contract) | Accenture, via Brooksource

Aug 2024 – Mar 2025

- Built healthcare data pipelines with **Azure Data Factory**, **Databricks** (PySpark), and SQL.
- Investigated **Databricks** dependencies in an Azure Data Factory environment with **400+** pipelines, measured storage use, and flagged duplicate records as defects for the team to fix.

Projects

Oakrift | TypeScript, Next.js, React, Node.js, PostgreSQL, Redis, Stripe, Claude & OpenAI APIs

Sep 2025 – Present

- Solo-built an AI SaaS that turned media coverage into sourced briefs and crisis alerts.
- Built ingestion from **8+** media platforms (thousands of items a week) with per-customer spend limits.
- Shipped it with **Claude Code** agent teams, a custom plugin with governance hooks, and a council where Claude and **Codex** blind-review each other's plans before big changes.
- Ran it in production solo, including **Stripe** billing, auth, multi-tenant access control, rate limiting, and monitoring.

Skills

- **Languages:** TypeScript, JavaScript, C#, Python, SQL
- **Full-stack:** React, Next.js, Node.js, .NET, REST APIs, PostgreSQL, SQL Server, Redis, Stripe
- **Cloud & DevOps:** Azure, AWS, Kubernetes, Docker, Terraform, GitHub Actions, Azure DevOps, Sentry
- **AI:** Claude Code, Codex, MCP servers, plugins & hooks, Grok Bot, Claude & OpenAI APIs, agentic loops
- **Other:** Bilingual (English/Spanish)

Education & Certifications

Florida International University | B.S. Economics, Minor in Computer Science

2022 – 2024

Harvard Business School | CRe

2025 – 2026

Certifications | Certified Kubernetes Administrator (CKA), 2025 | AWS Certified Developer – Associate, 2024
